A LEAGUE WORTH FOLLOWING.

Six athletes. One court. A match you want to see again.

03 PLAYERS PER SIDE

01 OFFICIAL MATCH

04:00 PROPOSED LIVE CLOCK

A product and visual proposal. Generated studies are not gameplay footage.

Open on the match. Leave with a favorite.

The smallest complete experience that can prove the league-and-fandom idea.

THE FIRST VISIT

01 Understand the contest

Who is playing, who has possession and what the next basket means.

02 Recognize a decision

See a player create an opening and an opponent try to close it.

03 Remember the athlete

A name, a movement, a consequence and a reason to watch a rematch.

PROTOTYPE SCOPE

2 provisional clubs

6 distinct athletes

1 intimate arena

A four-club, twelve-athlete league comes after repeat viewing is demonstrated.

THE REAL CREATIVE TEST

Can someone explain why the play worked, name the player they like, and choose to watch another match?

Future distribution: entertainment first; a separately assessed operator product later.

Three treatments. One clarity test.

Same broad athletic archetypes. These are medium explorations, not the final named roster.

A Graphic sculpture

RECOMMENDED STUDY

Smooth masses and controlled shading give contact, posture and jerseys room to read.

Next test: avoid generic mascot shapes; keep the ball clear at 390 px.

B Handmade miniatures

MATERIAL EXPLORATION

Tactile surfaces add warmth, but this generation drifts into realistic detail.

Not the recommended production target: too much surface noise on a phone.

C Sports comic

ALTERNATIVE

Strong contours and graphic attitude create a clear illustration language.

Next test: camera rotation, contact and contour stability in actual motion.

A is a visual recommendation, not proof of riggability, frame rate or viewer recognition.

Different before the name appears.

Recommended direction applied to a complete roster. All identities are provisional.

7 / LATCH
PIT / CREATOR

44 / BRUNT
PIT / FINISHER

11 / ZIP
PIT / SHOOTER

4 / NIX
OAK / DISRUPTOR

33 / TOLL
OAK / RIM GUARD

21 / SABLE
OAK / STOPPER

Patience meets pressure.

Club identity should explain how the team competes, then carry into clothing and venue details.

PITTSBURGH KILN

Patient. Physical. Earn the opening.

OAKLAND SWITCH

Disrupt. Exchange. Punish hesitation.

LATCH / 7

Creates passing lanes; passes up his own shot.

Nix tries to make patience look like fear.

NIX / 4

Reads passes; abandons position on a gamble.

Latch refuses to be hurried.

BRUNT / 44

Wins position; holds the ball when challenged.

Toll is the rival whose strength he respects.

TOLL / 33

Times vertical contests; recovers slowly outside.

Brunt tests his composure at the basket.

ZIP / 11

Finds small windows; forces shots when frustrated.

Sable knows the habits of a former teammate.

SABLE / 21

Contains and recovers; can overfocus on one player.

Zip wants to prove the release has changed.

Rivalries start as character context. Claims about wins, records and breakthroughs must later come from actual match events.

The phone is the primary seat.

A native layout study with a generated court illustration. All score state is illustrative.

01 / ONE GLANCE

Club identity, score, game clock and shot clock occupy a compact strip.

02 / THE COURT LEADS

Stable elevated composition. Bright floor, subdued crowd, strong side colors.

03 / CONTEXT IN ONE LINE

Name the player when the action makes the name useful.

04 / KEEP WATCHING

Schedule, history and player files live below the broadcast.

05 / ROTATE BY CHOICE

Landscape expands context. It never resets the match.

Not yet validated: ball tracking, limb contact, real device performance or animation. The next motion prototype must establish those.

More context. The same competition.

A separate camera and layout for the same official match; the illustration is a composition study.

HOLD THE CONTEST

Preserve the ball, receiver and defender through the decisive interaction.

RESTRAIN THE OVERLAYS

A score strip and contextual identification are enough during live play.

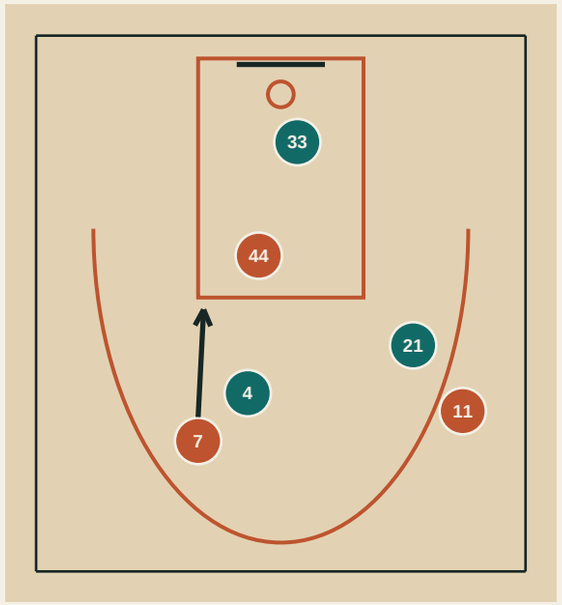
KEEP ONE EVENT HISTORY

Orientation, crowd effects and replay presentation cannot change outcomes.

Twelve seconds that explain a basket.

Authored example, not footage: Pittsburgh trails 12-14. A made three would make it 15-14.

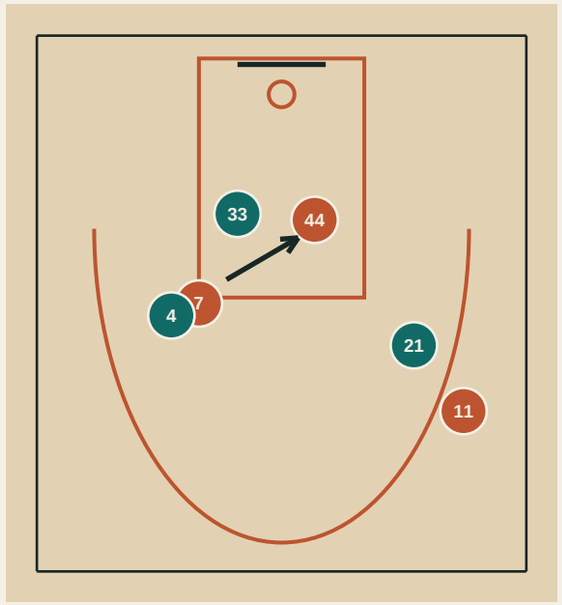
0-3 SEC



THE GAMBLE

Nix reaches. Latch keeps the dribble and turns toward a planted screen.

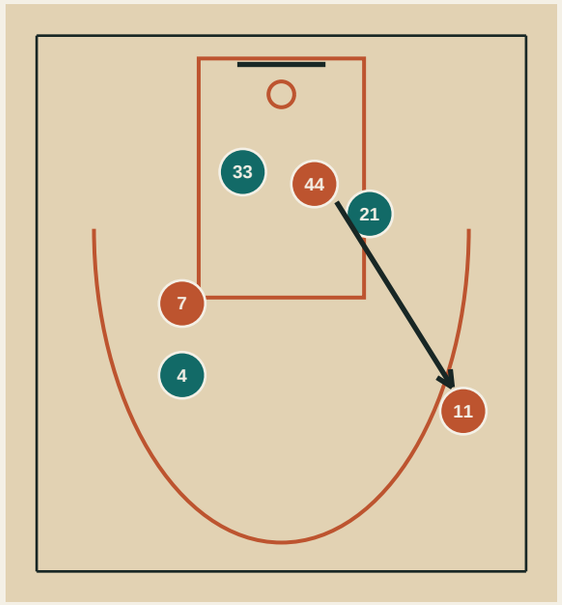
3-6 SEC



THE HELP

Toll steps up. Brunt rolls. Latch chooses the pocket pass.

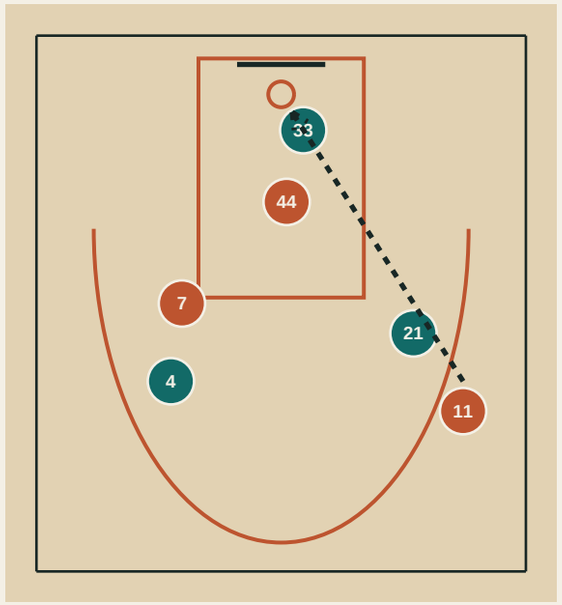
6-9 SEC



THE EXTRA PASS

Sable leaves Zip. Brunt recognizes help and passes out instead of forcing the hook.

9-12 SEC



THE RELEASE

Zip adjusts his feet. The shot leaves before the horn as Sable recovers.

DESIGN THE CHOICE, NOT A GUARANTEED ENDING

Release at 11.8 seconds; basket at about 13.0 (game clock 0:29); Oakland restarts at 15.0. No replay hides the next possession. Also demonstrate a defender staying home, a tipped pass, a late release and a miss. This ending is never forced.

Make the number mean something.

Uniform translation schematic. Provisional marks and names; no product is manufactured or offered for sale.

FRONT BACK

LATCH

A still upright beat makes the low pass surprising.

BRUNT

Feet plant before contact; the pivot carries visible weight.

ZIP

Set feet, gather, release, land. Fast is not instantaneous.

DEFENDERS

Slide, commit, contest and recover with visible tradeoffs.

A MEMORY EARNS THE SHIRT

The same name, number, face and signature must survive a live match, exact replay, player file and physical jersey. Merchandise demand is tested after attachment appears.

Familiar basketball. Explicit boundaries.

Experimental prototype rules. This is not a claim of FIBA compliance or wagering approval.

MATCH

3v3, one basket, no substitutions or elimination. Four minutes of live playing time; clock stops on baskets, whistles and free throws. Two-second automatic restarts.

SCORING

Two inside the arc; three outside; one per free throw. A foot touching the arc counts as inside. No target-score early finish.

POSSESSION

12 seconds. New defensive control resets to 12, including clearing time. Offensive rim rebounds reset; non-rim rebounds retain the clock or turn over if expired. A legal release can finish after the horn.

CLEARING

After a steal or defensive rebound, control the ball with both feet beyond the arc before shooting. A possession gained there is already cleared.

RESTARTS

Opening possession is selected once and recorded. Dead-ball changes and baskets restart at a fixed point beyond the arc. Last touch decides out-of-bounds. Replays never hide live play.

FOULS

Offensive foul: turnover, no basket. Nonshooting defense: restart, or two free throws from the fourth team foul. Shooting fouls: two/three for a miss, or basket plus one.

FREE THROWS

Final missed free throw is reboundable. No foul-outs. Team foul counts continue into overtime. Detailed transitions belong in the rules specification.

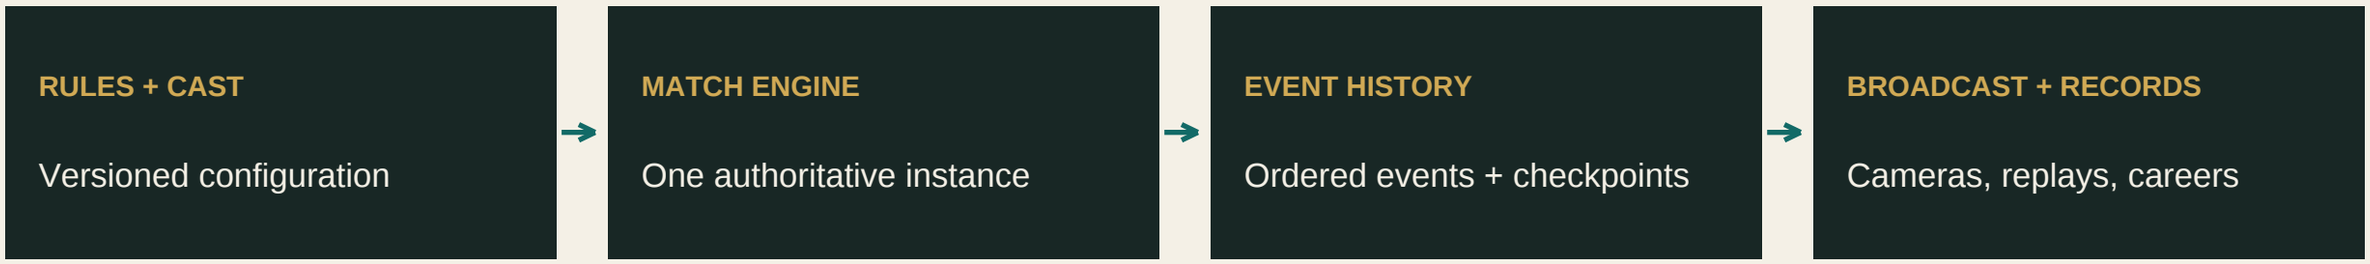
ENDING

Finish legal buzzer shots and associated penalties. Ties enter sudden-death overtime; the non-opening team starts. First valid point wins; unused free throws are omitted.

Actual broadcast length exceeds four minutes. Pacing, long overtime and technical suspension policies must be resolved by testing; never invent a result to fit a schedule.

One match. One record. Every surface agrees.

Separate competition decisions from rendering, commentary and commercial systems.



01 Motion proof

Dribble/catch, screen/contact, shot/rebound, reaction.

02 Competition proof

Two teams, simple geometry, a complete autonomous match.

03 Integrated prototype

Selected cast, one court, two cameras and exact replay.

04 Small league

Four clubs only after viewers choose to return.

Private future randomness. Controlled policy updates. Explicit outages. No influence from purchases, fan votes or wagering exposure. Operator integration requires separate counsel, laboratory and partner scoping.

Approve the look. Then prove the motion.

The recommendation is A: simplified graphic 3D, a six-athlete cast, and the portrait court as the primary broadcast.

CAST	Can you tell the six apart without the roster? Do you want to see them compete?
COURT	Does the phone composition make the ball and decisive matchup the focus?
TONE	Does the league feel like an original sports property you would follow?

NEXT BOUNDED BUILD

One motion study and one autonomous possession prototype. Assess real animation, ball contact and identity at phone size before a full application rebuild.
